The tides affect when and where the waves will break. Waves break when the water depth below them is about 1.3 times the wave height; a 6m wave, for example, breaks in 8m of water. So as the tide gets low the waves break on sand banks that they might not break on at high tide.

Understanding The Tides and Their Affect On The Waves

Tides Tides are the rise and fall of the Earth's seas and oceans, and they are caused by the pull of gravity from the sun and moon. Tides cause changes in the depths of the water, meaning that seas and oceans are continually experiencing cycles of high and low tides.
